

**ZERO KNOWS** details are everything for protecting Aviation Engines, Disk Shapes, Enclosures, Instrument and Combination Cases.

**TAKE ADVANTAGE OF POLYGUARD EDGE GUARD TO PROTECT THE MOST DELICATE SURFACE WITHOUT MARRING.**

# POLYGUARD EDGE PROTECTOR

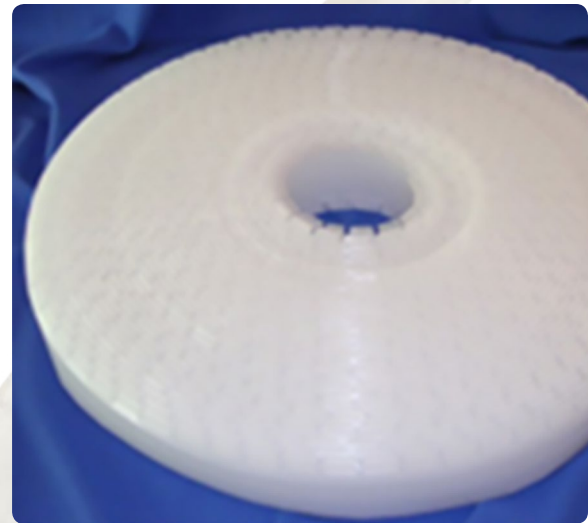

Designed specifically for the aviation industry, Polyguard offers the ultimate edge protection at the least cost for a variety of enclosures, instruments, engines, machines, tools and other disk shaped parts. Just wrap Polyguard around the critical edges, components or parts. Polyguard is made of low density polyethylene, a highly resilient material that is strong enough to protect the most delicate metal surfaces without marring.

Polyguard's unique exterior groove design stays in place when snapped over itself, making installation and removal simple, quick, and uncomplicated. It is designed to fully shield delicate edges and surfaces without the hassle and complication of tape or fasteners.

## ORDERING INFORMATION

Choose the appropriate width (A Dimension should be equal to, or larger, than actual part width) and specify part number and quantity. Polyguard comes in 100 foot rolls so specify your quantity in multiples of 100 feet.

PART NUMBER	DIM A	WT LB / CU FT
MP9000-500	0.50"	3.75
MP9000-750	0.75"	5.00
MP9000-1000	1.00"	5.50
MP9000-1500	1.50"	6.00
MP9000-2000	2.00"	6.75
MP9000-2500	2.50"	9.00
MP9000-3000	3.00"	9.50

## PROVIDES FLEXIBLE PROTECTION AT LOW COST

- Fully protects delicate edges
- Made of flexible, low density polyethylene
- 7 standard sizes to fit most applications
- All sizes available from stock (1 week ARO)
- No tape or fasteners required to hold in place
- Color is natural (translucent, no pigment)
